

EJ Prescott, Inc. relies on DataView for on-time vendor payments and integrated accounting system

Industry
Distribution

Challenge
Manual, Inaccurate
A/P filing system

Solution
DataView
Document
Management
System

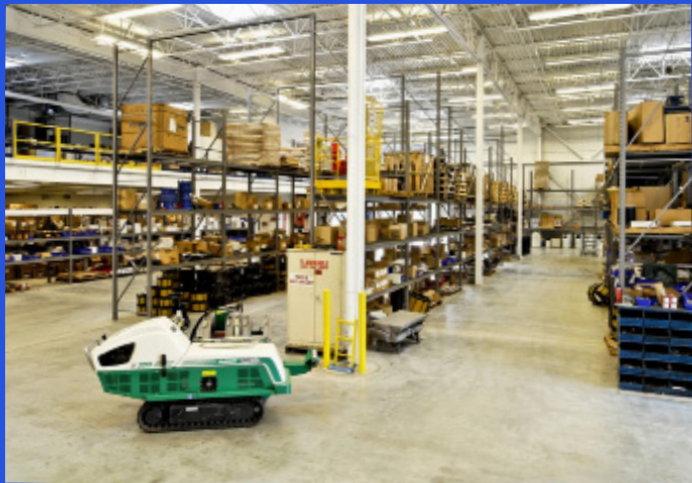

Results
On-time payments
to vendors

Improved customer
service

Centralized
accounting system

Company

Everett J. Prescott, Inc. (EJP) was founded in 1955 in Gardiner, Maine as the first waterworks distributor north of Massachusetts offering water-main tapping and installation, and underground boring. EJP's first two branches, in Concord, New Hampshire, and Montpelier, Vermont opened in the 1970's. Today, EJP offers the finest water, sewer, drain and gas products, backed by an exceptional level of professional service. The company employs more than 300 people across all of its businesses and distribution branches in all six New England states as well as New York, Indiana and Ohio.

“We can do so much more, so much more easily, with DataView. The product is reasonably priced and absolutely packed with the kind of features we wanted in an electronic invoicing archival and retrieval solution.”

Dan Willette, Chief Information Officer, EJ Prescott, Inc.

Challenge:

Manual, paper-based A/P filing system led to discrepancies in PO and vendor invoicing, increased workload for the finance team and late payments to vendors.

Seamless Integration with ERP

DataView utilizes over 400,000 folders with more than 1.4 million documents

On-time Vendor Payments

As invoices are received, users enter the PO, hit a button to read the screen, and convert it to an electronic document

Improved Customer Service

Fast access to digitized documents help staff respond promptly to questions from vendors and customers

Solution:

DataView is used extensively throughout EJ Prescott's operations. Accounts Payable uses the solution to store and index vendor invoices with backup documentation and receiving reports. The A/R team views scanned Payments on Account, Credit Apps and references. DataView stores all of the company's Fixed Assets, including information pertaining to vehicles, disposals and sales, and PEP Transportation records such as vendor invoices, fleet maintenance and driver-related documents. DataView is an integral component of the company's centralized accounting and is instrumental in ensuring that invoices are paid on time and helping EJ Prescott's staff answer questions promptly from vendors and customers.

Results:

- Timely, accurate payment of vendor invoices
- Able to spend more time on sales and other tasks
- Centralized payables for each division

“As vendor invoices are received, we just enter the PO, hit a button to scrape, or read, the screen and convert the contents to an electronic document. From there, DataView matches the invoice to the right vendor and stores the file. It couldn't be easier.”

Dan Willette, Chief Information Officer, EJ Prescott, Inc.
