

ROC Warehouse Management System (WMS)

Industries

Food & Beverage
and Manufacturing

Benefits

Improve Inventory Visibility and Control

Our WMS software meets the demanding needs of supply chain managers with near-perfect inventory management and control. ROC WMS uses mobile wireless terminals and bar code scanners, and each fully configurable function is aimed at specific types of warehouse operations. Tightly controlled inventory helps reduce inventory levels while providing very high order fill rates, eliminate costly physical inventory counts, and avoid wasted labor caused by inaccurate inventory records.

Maximize Productivity

Our WMS solution is completely paperless, allowing you to direct work in the warehouse via wireless terminals. Paperless operations combined with inventory accuracy boosts productivity in the warehouse by 10% to 15%.

Optimize Physical Space

A critical aspect of any warehouse is managing the physical locations of product. Our state-of-the-art WMS solution utilizes sophisticated but configurable parameters and rules to maximize space utilization. Reduce your inventory and improve the efficient use of your space.

Protect Equipment

Improved productivity means less wear and tear on your warehousing equipment. Our WMS software lets you plan efficient paths for work and reduces the time spent and miles driven.

Features

Warehouse & Distribution Center Efficiency

Optimize employee and equipment resources through intelligent workflow management. Maximize efficiency in product placement and ensure accurate product tracking with configurable cycle counting, throughout the warehouse.

Reduce Operating Costs

Eliminate costly annual physical inventories and reduce carrying costs through accurate product tracking and placement. Lower shipping costs by reducing shipping errors and decrease time and money spent correcting employee errors through an extensive audit trail.

Real-time Visibility

Enjoy near 100% inventory accuracy regarding the quantity on hand for each item in the warehouse and in each location for each lot or pallet. High inventory accuracy combined with paperless order picking ensures pick accuracy that helps you save significant money.

Improve Customer Relationships

Decrease turnaround time and maximize order fill rates with order pooling, pick planning and improved inventory accuracy and visibility. Ship the right product to the right place at the right time and track smaller, more frequent orders so customers get exactly what they need.
